PROFILE

A third-year Computer Science Engineering undergraduate specializing in Artificial Intelligence and Machine Learning, with a practical focus on building intelligent systems that address real-world problems. Technical background encompasses the implementation of classical machine learning models for computer vision and time-series forecasting, as well as the engineering of autonomous agents using generative AI and web automation. Experienced in constructing end-to-end pipelines — from raw data extraction through to deployment. Currently seeking an internship opportunity to apply acquired skills in a collaborative environment and contribute to impactful AI solutions.

EDUCATION

Bachelor of Technology in Computer Science & Engineering (AI & ML) *Aug. 2024 – Jun. 2028 (Expected)*
Jain University, Kochi Kochi, India

- **Cumulative GPA:** 8.7 / 10.0 (Current Semester GPA: 8.9 / 10.0)

TECHNICAL SKILLS

Programming Languages	Python, SQL, C, Java
Libraries & Frameworks	PyTorch, TensorFlow, Scikit-Learn, Pandas, NumPy, LangChain, LlamaIndex, Hugging Face Transformers, OpenCV, Google Gemini API, Selenium, BeautifulSoup, LanceDB
Tools & Platforms	Docker, Git, Streamlit, Supabase, Mamba, PowerShell, Ollama
Core Competencies	Multi-Agent Systems, Retrieval-Augmented Generation (RAG), Edge AI Deployment, Time-Series Forecasting, Computer Vision (CNNs), Prompt Engineering, Web Automation & Data Extraction
Soft Skills	Rapid Prototyping, System Architecture Design, Technical Documentation, Workflow Automation, Research & Analysis, Team Coordination

PROJECTS

NexusAir: Local-First AI Knowledge Management System *Apr. 2026 – May 2026*
GraphRAG, Hybrid Semantic Retrieval, Local LLM Deployment

- Engineered a local-first knowledge management system integrating GraphRAG with hybrid semantic retrieval to support structured and unstructured information queries.
- Deployed local LLM inference pipelines using Ollama, ensuring complete data privacy and fully offline operational capability.

Deep Sentinel: Multi-Agent Deepfake Detection Framework *Feb. 2026 – Mar. 2026*
Multi-Agent Systems, Multimodal Analysis, Mobile Edge Deployment

- Architected a multi-agent deepfake detection system employing multimodal analysis to identify AI-generated media across visual and auditory modalities.
- Fine-tuned detection models on the C23 dataset and developed a lightweight, edge-optimized mobile application enabling real-time, on-device inference.

JobSniper: Interactive AI Job Scraping & Matching Dashboard *Jan. 2026 – Feb. 2026*
LLM-Driven Aggregation, Relevance Scoring, and Cloud-Based Tracking

- Developed a centralized Streamlit application to automate job listing aggregation across 5 major recruitment

platforms using Selenium and BeautifulSoup.

- Engineered a dual-engine relevance scorer leveraging the Google Gemini API to dynamically filter AI/ML roles against a curated candidate skill profile.
- Integrated Supabase (PostgreSQL) for persistent data storage, enabling cloud-based application status management and real-time labor market analytics.

Hyper-Local Vector Control Architecture

Jan. 2026

Research Paper — Physics-Aware Edge AI & Polarimetric Vision

- Authored a research paper proposing a privacy-preserving edge vision architecture for detecting cryptic stagnant water using the SegFormer-B0 transformer in conjunction with optical polarization cues.
- Detailed an inference pipeline optimized with TensorRT for deployment on the NVIDIA Jetson Orin Nano, with synthetic training data generated via Unreal Engine 5 simulations.

Hydro-Intel: Real-Time Groundwater Level Predictor

Sep. 2025 – Oct. 2025

Time-Series Forecasting using XGBoost on DWLR Sensor Data

- Developed an XGBoost time-series forecasting model to predict groundwater levels from Digital Water Level Recorder (DWLR) sensor data.
- Designed and executed advanced data preprocessing and outlier detection pipelines, achieving substantially lower error rates compared to baseline linear regression models.
