👤 PROFILE

AI/ML undergraduate with a practical focus on building intelligent systems that solve real-world problems. My technical background includes implementing classical machine learning models for computer vision and forecasting, as well as engineering autonomous agents using Generative AI and web automation. I enjoy the challenge of constructing end-to-end pipelines—from raw data extraction to deployment—and am seeking an internship opportunity to apply my skills in a collaborative environment where I can contribute to impactful AI solutions.

🧠 SKILLS

- Languages: Python, Java, SQL
- Libraries/Frameworks: PyTorch, TensorFlow, Scikit-learn, Pandas, NumPy, Selenium, Google Gemini API, OpenPyXL, SMTP,
- Tools & Platforms: Docker, Git, Streamlit, Linux Automation (Cron), Environment Management (.env)
- Concepts: Supervised Learning, CNNs, Time-Series Forecasting, LLM Integration, Prompt Engineering, Web Scraping & Data Extraction, API Rate Limiting
- Soft Skills: Research & Analysis, Problem Solving, Communication, Team Coordination, Critical Thinking, Analytical Skills, Adaptability, Rapid Prototyping, Workflow Automation

📁 PROJECTS

Real-Time Groundwater Predictor 🔗, Sep 2025 – Oct 2025

Time-Series Forecasting using XGBoost on Sensor Data

- Built a machine learning model to predict groundwater levels using time-series data from DWLR sensors.
- Apply data preprocessing techniques such as handling missing values and outlier detection to improve model performance.
- Train and evaluate an XGBoost regression model, achieving lower error than baseline linear models.

Personal Finance Tracker 🔗, Nov 2025 – Dec 2025

Expense Tracking Web Application with Database Integration

- Develop a full-stack application to track income and expenses with structured data storage.
- Design normalized PostgreSQL schemas and implements SQL queries for transaction management and reporting.
- Uses Docker to containerize the application, ensuring consistent development and deployment environments.

Fashion-MNIST Image Classifier 🔗, Dec 2025 – Jan 2026

CNN-Based Image Classification using TensorFlow

- Built a Convolutional Neural Network (CNN) to classify clothing images from the Fashion-MNIST dataset.

- Implement data preprocessing and model training using TensorFlow and Keras to achieve reliable classification performance.
- Deploy the trained model using Streamlit, enabling real-time image classification through a simple web interface.

Hyper-Local Vector Control Architecture

Jan 2026 – Jan 2026

Research on Physics-Aware Edge AI & Polarimetric Vision

- Designed a privacy-preserving edge vision architecture to detect cryptic stagnant water reservoirs in urban environments using optical polarization cues instead of standard RGB imagery.
- Proposed a pipeline integrating the SegFormer-B0 transformer model, optimized with TensorRT for real-time inference on NVIDIA Jetson Orin Nano embedded hardware.
- Formulated a simulation-driven data generation strategy using Unreal Engine 5 and AirSim to synthesize labeled polarimetric aerial datasets, addressing the scarcity of real-world training data.

JobSniper , *Interactive AI Job Scraper & Matching*

Jan 2026 – Feb 2026

Dashboard LLM-Driven Aggregation, Scoring, & Cloud Tracking

System

- Architected a centralized job hunting hub using Streamlit, enabling manual, on-demand scraping across five major platforms (LinkedIn, Indeed, Glassdoor, ZipRecruiter, and Google Jobs).
- Developed a dual-engine relevance scorer—utilizing Google Gemini for semantic depth or a keyword-based local analyzer—to evaluate AI/ML internships against a personalized skill profile.
- Integrated a real-time log viewer and status monitor into the dashboard to provide transparency during the manual scraping and scoring process.
- Implemented a persistent storage layer using Supabase (PostgreSQL) and Excel synchronization for a multi-page application tracker, featuring cloud-based status management and market analytics.

EDUCATION

Jain University, Kochi, *Bachelor of Technology in Computer Science & Engineering (AI & ML)*

Aug 2024 – Present | Kochi, India

- Aug 2024 - June 2028
- CGPA: 8.7 / 10 (Current Semester: 9.2)

CERTIFICATES

- Machine Learning with Python — IBM (Coursera) 
- Developing AI Applications with Python and Flask — IBM (Coursera) 
- Python Data Structures — University of Michigan (Coursera) 
- Fundamentals of Java Programming — Board Infinity
